

Backup when you need it. The app no one should have to use — but if you do, you have backup.

The app no one should have to use.

But if you do, you have backup.

LoopIn is a private safety layer for dating, nights out, rides, meetups, late shifts, campus walks, and the moments between safe places. Your plan, check-ins, location status, private-line activity, and notes stay locked in your vault as the night unfolds — nothing is shared by default. But if you tap for help, miss a check-in, or use your code phrase, LoopIn gives your crew exactly what they need to act: where you are, who you're with, what changed, and how to reach you.

WHY LOOPIN

Millions of nights out involve some risk, but safety is still a patchwork of screenshots, gut instinct, and hoping someone answers their phone. LoopIn brings a private, intelligent safety layer to real life — dating is the first wedge, not the whole product.

HOW LOOPIN FITS INTO YOUR NIGHT

1

Before

Run a profile or chat through AI BFF, build a Date Plan, and choose your Trusted Crew so the right people are ready if you need them.

2

During

Scheduled Check-Ins and Walk With Me run quietly in the background. If something feels off, Emergency Loop and Fake Call are always one tap away.

3

After

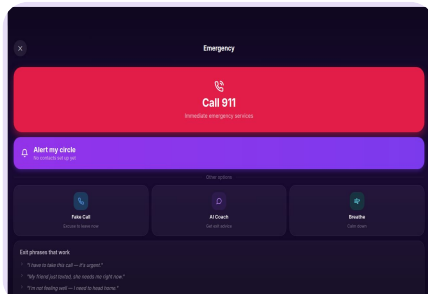

Log a Post-Plan Reflection, save anything important to your Safety Vault or Evidence Timeline, and let patterns surface over time.

LoopIn

hello@loopin.app · loopin.app

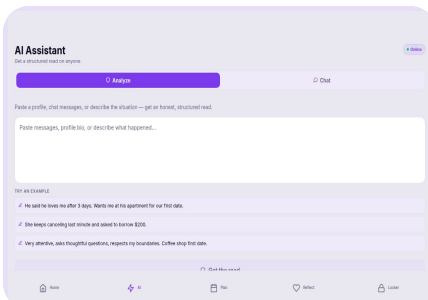

BUILT FOR THE MOMENTS THAT MATTER

Six tools, one app — designed around the real timeline of a night, from planning it to getting home safe.

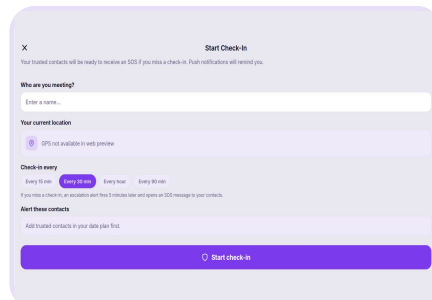

Emergency Loop

One tap starts a 911 call, alerts your trusted crew, fires a believable fake call, or opens an AI coach — all from a single emergency screen built for the moment you can't think straight.

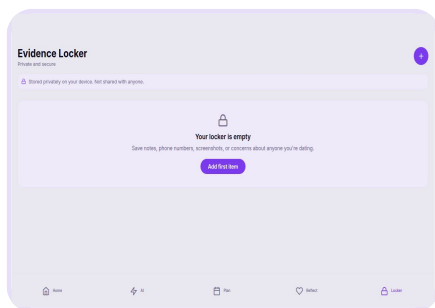

AI BFF

Paste a chat, a bio, or describe what happened — LoopIn's AI gives you a structured, non-judgmental read: what's a green flag, what's a yellow flag, and what's worth walking away from.

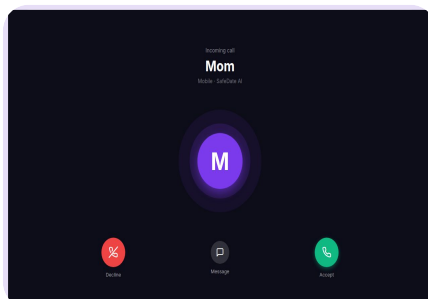

Scheduled Check-Ins

Set a check-in interval for any plan — every 15 to 90 minutes. Miss one, and an escalation alert fires automatically to your crew.

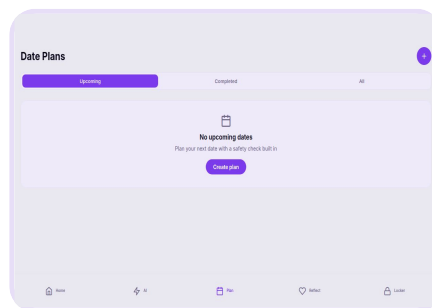

Safety Vault

A private, on-device locker for notes, phone numbers, screenshots, and concerns about anyone in your life — nothing leaves your phone unless you choose to share it.

Fake Call

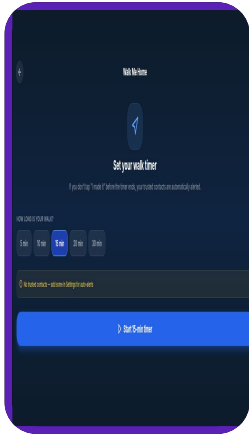

A fully believable incoming call from a saved contact, ready in one tap — the easiest, most natural excuse to leave a situation that isn't going well.

Date Plans

A guided planner for any plan: who, where, and when — with a built-in safety score and check-in schedule set up in advance.

THE FEATURES THAT MAKE LOOPIN BIGGER THAN DATING

Walk With Me — For The Moments Between Safe Places

Start Walk With Me when you're heading to your car, leaving work late, waiting for transit, crossing campus, coming home from the library, or getting from a rideshare to your door. Your crew isn't tracking you all night — they're only looped in if you miss a check-in, tap for help, or something changes.

AI BFF — Your Structured, Judgment-Free Read

LoopIn's AI isn't a chatbot bolted on as an afterthought — it's the core of the app. Paste in a profile, a screenshot of a chat, or just describe what's going on, and get a structured, non-judgmental read in seconds: green flags, yellow flags, and red flags called out plainly. Switch to Chat mode for real-time, back-and-forth coaching on boundaries, what to say next, or how to gracefully exit — like texting a smart friend who's always awake.

Emergency Loop — One Tap, Every Option

The Emergency screen is built for the seconds that matter most. Start a 911 call, alert your entire trusted crew with your location, trigger a Fake Call to excuse yourself, open the Breathe exercise to calm down, or pull up ready-made exit phrases you can read straight off the screen — all without digging through menus while your hands are shaking.

Start 911 call

Alert my crew

Exit phrases

AND EVERYTHING ELSE IN YOUR CORNER

Private Line

A masked phone number for texts and calls — your real number never gets shared until you decide it should.

Evidence Timeline

A private, time-stamped record of concerning messages, numbers, or incidents — organized and ready if something ever needs to be reported.

Breathe & Ground

A guided breathing exercise built directly into the emergency flow, for the moments panic makes it hard to think.

Trusted Crew

Choose the people who can be looped in if you need backup. They don't see your night by default, but if a safety trigger fires, they get the details that matter.

Post-Plan Reflection

A quiet space to record how a night actually felt. Over time, LoopIn surfaces patterns you might not notice on your own.

Scheduled Check-Ins

Set a check-in interval for any plan — miss one and an escalation alert reaches your crew automatically.

PRIVACY BY DESIGN

LoopIn is not live-tracking for your friends. Your plans, location status, notes, private-line activity, and evidence stay locked in your vault by default. Your crew only gets details if you ask for help, miss a check-in, or trigger a safety phrase. Not everyone needs to know where you are all the time. But when something is wrong, the right people should know exactly where to go.

GET LOOPIN

Backup when you need it, wherever the night takes you.

Free to start — every core safety tool is included. LoopIn+ unlocks unlimited AI reads, live coaching, and reflection insights. hello@loopin.app
