

SafeDate AI

Your private AI companion for dating smarter, safer, and with self-trust.

INVESTOR ONE-PAGER

THE PROBLEM

Millions date online every week, but personal safety is still a patchwork of screenshots, group-chat advice, and gut instinct. People are left alone to vet a match, decide if a date is safe, and make sense of what happened afterward — with no private, intelligent layer looking out for them.

WHAT IT DOES

AI Red-Flag Analysis

Paste a chat or profile, get structured green / yellow / red-flag insight in seconds.

Trusted Circle

Loop in chosen contacts who are notified before a date.

Post-Date Reflection

Emotional check-ins that surface patterns over time.

WHY NOW

Online dating is now the dominant way people meet, and personal safety and emotional wellbeing are top unmet needs — especially for women. AI finally makes real-time, personalized coaching affordable at consumer scale.

THE SOLUTION

SafeDate AI sits beside whatever dating app you already use — a private, AI-powered safety, coaching, and accountability companion. Everything is stored on the device by default. Privacy isn't a feature; it's the architecture.

Smart Date Plans

A guided wizard to plan each date with a built-in safety score.

AI Wingwoman

A conversational coach for boundaries, message help, and in-the-moment guidance.

Evidence Locker

A private, device-only vault for notes, numbers, and concerns.

BUSINESS MODEL

Freemium subscription. Core safety tools are free; SafeDate+ (\$/mo — *your price*) unlocks unlimited AI analysis, coaching, and reflection insights. On-device design means no data to breach and low server cost per user.

TRACTION

Add your traction here — e.g., beta users, waitlist size, retention, early testimonials, or partnerships.

THE ASK

Raising [amount + stage] to grow the team, scale user acquisition, and expand AI capabilities.

Tell me the amount and stage and I'll lock it in (replace the highlighted text).
